

PROJECTS/ACHIEVEMENTS

- **ITTECOP project** ordered by the Ministry of Ecology, Sustainable Development, Territory and Housing Equality (2012-2015): impact of transport infrastructures on the functioning and perception of territories.
- **ANR COLLENER 2012-2015:** Socio-technical collectives and energy transition: Study of the development of renewable energies and their insertion in territories in Germany.

APPLICATIONS/MARKETS

- Public policies (local and regional authorities, state services, ...);
- Institutions/Public agencies;
- Environmental sector;
- Territory planning;
- Energy.

EXPERTISE

- Analysis and evaluation of territorial development policies;
- Analysis of landscape evolution processes;
- Support in urban and industrial spaces planning;
- Production of territorial and environmental diagnostics;
- Geopolitical analysis of territorial evolution;
- Qualitative and quantitative evaluation of the valuable potential of territories.

PRESENTATION

To face climate changes and requirements linked to spatial planning, the LOTERR laboratory conducts pluridisciplinary studies on **territorial and landscape heritages**, as well as on present and **prospective territory modelling**. This allows measuring the print left by past actions conducted by public and private actors, and to propose new supports of decision and territory management. The laboratory contributes on reflections on:

- Renewable energy insertion within territories and their impact on landscapes;
- Impact and perception of new infrastructures on territories;
- Spatial reorganization: reconversion of industrial territories/eco-neighborhood planning.

LOTERR is a research unit in geography gathering about thirty researchers, engineers and technical staffs. Complementarities between researchers' methodologies in the LOTERR makes it a competent center to study territories in their different dimensions: naturel setting, landscape and heritage characteristics, perception and identity of territories.
