

MEDTECH DIAGNOSIS

MEDOR

Technology matured by

SATT Nord

- Medor is a device for analyzing volatile organic compounds for early cancer diagnosis using mass spectrometry.

Diagnosis

#Cancerology

#MedicalDevice

The Medor medical device uses mass spectrometry to detect the volatile organic compounds (VOCs) that reflect our pathophysiological state.

The 1st POC is on the detection of breast cancer from VOCs Non-invasively and painlessly using wipes or swabs (exhaled air, sweat, tears, blood, urine).

Possible applications in a variety of pathologies

- Cancer, health, food, forensics, environment
