

GREENTECH WATER FILTRATION

BIOFILTREAU

Technology matured by

BIOFILTREAU is a water treatment process using non-recovered bio-sourced substrates: a competitive alternative to activated carbon.

#Filtration

#Water

#Plant Biomass

BIOFILTREAU technology is a new water decontamination method that uses plant biomass to replace activated carbon. It offers superior retention capacity for metallic pollutants. This bio-sourced solution is a more efficient alternative to activated charcoal, while also being more economical.
