

MEDTECH HealthCare Software

OPTIMUM

Technology matured by

OPTIMUM is a web service tool for prioritization of patients in emergency department,

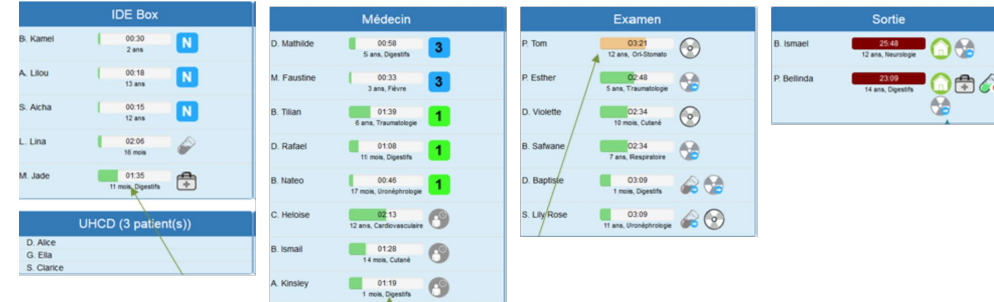

#Emergency

#HealthCare Software

#Patients prioritization

The Optimum solution is a **Web Service**:

- which applies sorting rules, specific to the department in question, to the data received from the business software (ResUrgences, Sillage or others) **without re-entry of data**,
- which will calculate, **in real time**, a tension indicator, based on 3 years of history of the considered department
- which will allow to **visualize the delay** in patient care on a synoptic screen independent of the business software.
