## RESTO

Technology matured by

**Fiber optic Resonator with optimized stability and performance**

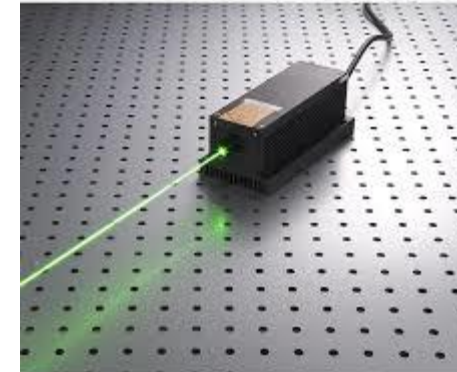

**#LaserSource**

**#LiDAR**

**#Resonator**

RESTO's innovative technology is a LiDAR component: a multi-frequency laser source capable of generating a highly stable frequency comb composed of extremely pure light signals.

The purpose of the invention is to reduce the amplitude of fluctuations by an order of magnitude. The targeted applications are numerous: floating wind turbines, automotive, and military.

**Partnership : Clients or end-users**

**IP : Patent    TRL : 3**
