Software platform for remote access to
experimental laboratory devices

#Laboratories

#Distance

#Physical

REMOTLAB is a software solution designed for education, scientific training, and collaborative research requiring the use of laboratory equipment to conduct experiments. The platform provides physical equipment that can be accessed remotely. Experiments will be conducted remotely using physical hardware. Data will be collected in a "virtual collective" laboratory.

Partnership : Clients, end-users

IP : Filing with the Program Protection Agency

TRL : 5
