

FACE TO FACE

Technology matured by 

Face to face is an innovative AI for predicting the before-and-after effects of a treatment from images, and for obtaining a metric of this effect.

#Prediction

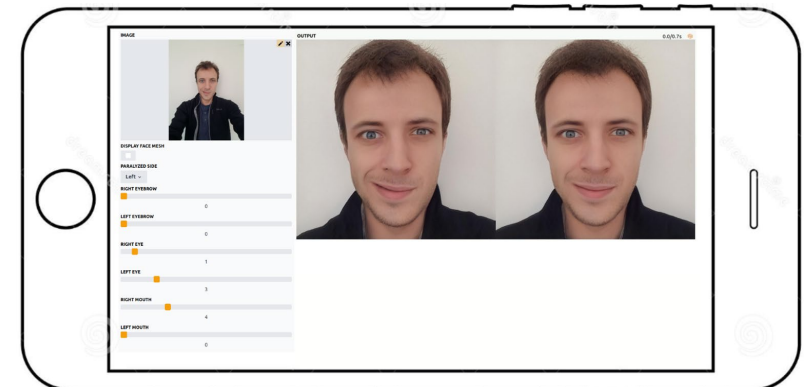

#AI

#Ehealth

Face to Face AI uses an algorithm to predict the effects of a treatment based on the pre-treatment image. The 1st POC established a predictive tool for facial appearance after botulinum toxin facial symmetrization treatment.

Prerequisites for a new POC :

- Consistent, high-quality before-and-after image bank
- A well-defined metric to evaluate the effect
