

GREENTECH CHEMISTRY

FAGOXY

Technology matured by

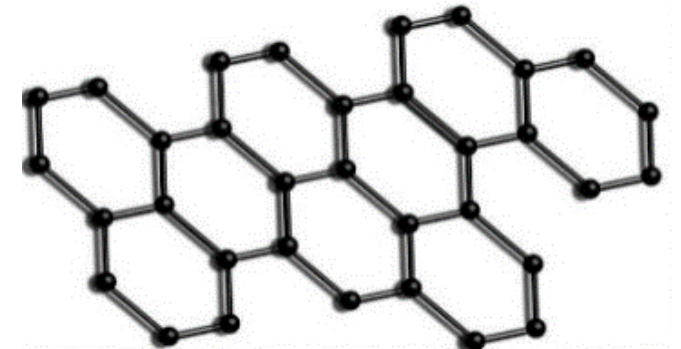

Revolutionary graphene manufacturing process, more flexible, faster, more environmentally friendly and less expensive.

#Graphen

#PECVD

#Material

FAGOXY technology is a new graphene manufacturing process based on PECVD (Plasma Enhanced Chemical Vapor Deposition) technology. This process offers the possibility of depositing graphene on a large amount of substrate while using a moderate vacuum at room temperature and without catalyst.

Partnership : Licencing, co-development

IP : Patent

TRL : 3
