MUNIA

Technology matured by **SATT Nord**

Urban mobility software based on new artificial intelligence technologies

| #AI | #Mobility | #Competition |

MUNIA is an AI-based module for adapting supply and demand in certain sectors: multimodal transportation, directing vehicles to parking spaces, and positioning taxi fleets based on demand location forecasts.
The tool helps match demand with available resources while minimizing the total cost of assignments.

Partnership : Clients, end-users   **IP :** Filing with the Program Protection Agency   **TRL :** 3
